

Care Net Pregnancy Center of Dane County
More than Just Pregnancy Support

Many people in our supporting churches are aware that Care Net provides free pregnancy testing and support to women and men facing unplanned pregnancies. But, did you know that Care Net is a medical clinic? One of the medical services Care Net provides is free ultrasound services to clients to confirm the presence of a viable intrauterine pregnancy and to determine gestational age.

A service that Care Net offers, that is less known, is Free Testing and Treatment for Sexually Transmitted Infections (STIs) for women. Many of the clients that come to Care Net are at risk for having an STI. At Care Net they can receive confidential care, education about common STIs, free testing and treatment and sexual integrity counseling.

A recent client to Care Net's medical clinic commented on how the staff was so considerate and non-judgmental. She said that she now planned on changing her lifestyle. She didn't know how at risk she was putting herself by having multiple sexual partners. She thanked the staff for caring about her.

To find out more about Care Net's free medical services visit our website at www.carenetdane.org.
